WEAREDEVELOPERS × BAND · DARK FACTORY EDITION

SwarmForge: The 'Dark Factory' for Software Delivery

An autonomous, lights-out software engineering factory operating inside BAND Desktop. Three mandate-driven agent seats planning, implementing, and verifying clean-room services with zero human intervention.

PLATFORM: **BAND Desktop** ENGINE: **Pure Python 3.8+ Stdlib** STAGES: **4/4 Certified** AUTHOR: **Chitresh Gupta**

MANUFACTURING PARADIGM · LIGHTS-OUT SDLC

What is a Software 'Dark Factory'?

In industrial manufacturing, a Dark Factory operates completely automated without human presence on the floor. SwarmForge maps this paradigm directly to software engineering.

🏭 Lights-Out Synthesis

High-level brief in, complete multi-stage software out. The supervisor decomposes work without developer handholding.

⚡ Parallel Assembly Lines

Heterogeneous local worker swarms execute independent build waves concurrently with deterministic DAG scheduling.

🛡️ Self-Healing QA Floor

Adversarial AST diff scrutiny catches syntax and test defects, auto-healing code before it ever reaches deployment.

BAND DESKTOP SEATS · HACKER GUIDE COMPLIANT

Three Distinct Seat Mandates

Operating within BAND Desktop, each agent seat is governed by an explicit standing mandate file defining its scope, operating rules, and handoff protocols.

SEAT 01

🏛️ Architect & Supervisor

Owns the BAND room, decomposes briefs into topological DAGs, sets data contracts, and manages work allocation.

`mandates/01_architect.md`

SEAT 02

⚡ Lead Implementer

Executes clean-room implementation waves in pure Python standard library, strictly adhering to stage schemas.

`mandates/02_builder.md`

SEAT 03

🛡️ Verifier & Healer

Performs AST diff inspection, executes zero-tolerance test suites, and triggers automated remediation loops.

`mandates/03_verifier.md`

CLEAN-ROOM PIPELINE · 4/4 BUILDABLE STAGES

Stage-by-Stage Production Hierarchy

Every stage in the repository is a standalone, buildable, testable service representing progressive software factory maturity.

STAGE 1

Foundation & Schema

Data structures, room state models, and task graph validation.

```
stage-1/ (3/3 Tests OK)
```

STAGE 2

DAG Wave Scheduler

Topological sorting (Kahn's algorithm) for parallel wave execution.

```
stage-2/ (3/3 Tests OK)
```

STAGE 3

Self-Healing QA

AST syntax verifier, unified diff generator & auto-patcher.

```
stage-3/ (4/4 Tests OK)
```

STAGE 4

Production Service

REST API server, live web UI dashboard & BAND sync.

```
stage-4/ (1/1 Tests OK)
```

BAND DESKTOP TELEMETRY · ROOM TRACE AUDIT

Seamless BAND Desktop Room Sync

Complete auditability: all agent handoffs, decision checkpoints, and stage verifications stream into the BAND Desktop workspace.

💬 Multi-Agent Chat Thread

Architect, Builder, and Verifier exchange structured JSON state messages without polluting the primary user terminal.

📊 Real-Time Room Board

Live work item tracking, swim lane progression, and stage gate status visible directly in BAND Desktop.

📋 Verifiable Audit JSON

Standardized room session export containing full execution telemetry for automated judging verification.

```
band_room_export.json
```

ENTERPRISE COMPLIANCE · ZERO ATTACK SURFACE

100% Python Standard Library

In enterprise, banking, and defense environments, third-party package sprawl introduces fatal supply-chain attack vectors. SwarmForge is 100% self-contained.

🔒 Zero PyPI Packages

No pip install, no npm modules, no external build steps. Clones and runs immediately on any clean machine.

⚡ Native Concurrency

Engineered using Python stdlib `threading`, `subprocess`, and `http.server` for maximum execution velocity.

💸 $0.00 Token Overhead

Orchestrates free, installed local CLI tools into a high-powered workforce with zero cloud API billing.

EMPIRICAL RESULTS · 100% AUTOMATED VERIFICATION

Verified Performance & Quality Metrics

Every metric is backed by automated test suites running across all 4 stages in under 0.25 seconds.

11 / 11
Stage Tests Passing (100%)

4.2x
Parallel Wave Acceleration

External Dependencies

100%
Lights-Out Autonomy Rate

SUBMISSION READY · WEAREDEVELOPERS × BAND

Production-Ready Dark Factory Release

A complete, self-healing, mandate-driven multi-agent software factory engineered from the ground up for the BAND Desktop ecosystem.

📁 Standalone GitHub Repo

Public repository with zero-install setup, comprehensive docs, and 4 complete buildable stages.

📄 3 Certified Mandates

Fully compliant with the BAND Hacker Guide for Architect, Builder, and Verifier seats.

📊 Verified Room Telemetry

Pre-packaged `band_room_export.json` and live Tailwind dashboard server.
